What is it

It is an interface between AmiBroker and ZerodhaTrader (Trading Platform provided by Zerodha). This bridge automates most of the tasks associated with placing Buy/Sell orders.

Pain-point

Currently traders maintain **non-connected** setups for Technical Analysis and Order Management. Whenever trading signal triggers in charting platform, traders place order in their trading platform **manually**. For frequent day-traders, this is error-prone, time-consuming & needless duplication of efforts.

Also, if multiple orders are getting triggered from one or more trading strategies, the same cannot be handled effectively in realtime.

How it is addressed

Global Datafeeds addresses this pain-point by **connecting** the Analysis and OMS setups.

How it works

Whenever signal triggers in charting / analysis platform, it instantly reflects in OMS – picking up the details of the intended trade from the analysis platform **automatically**. Then depending on the status of the user, the order will be placed on the exchange as per following 2 scenarios*.

A. If the user is a **Dealer** :

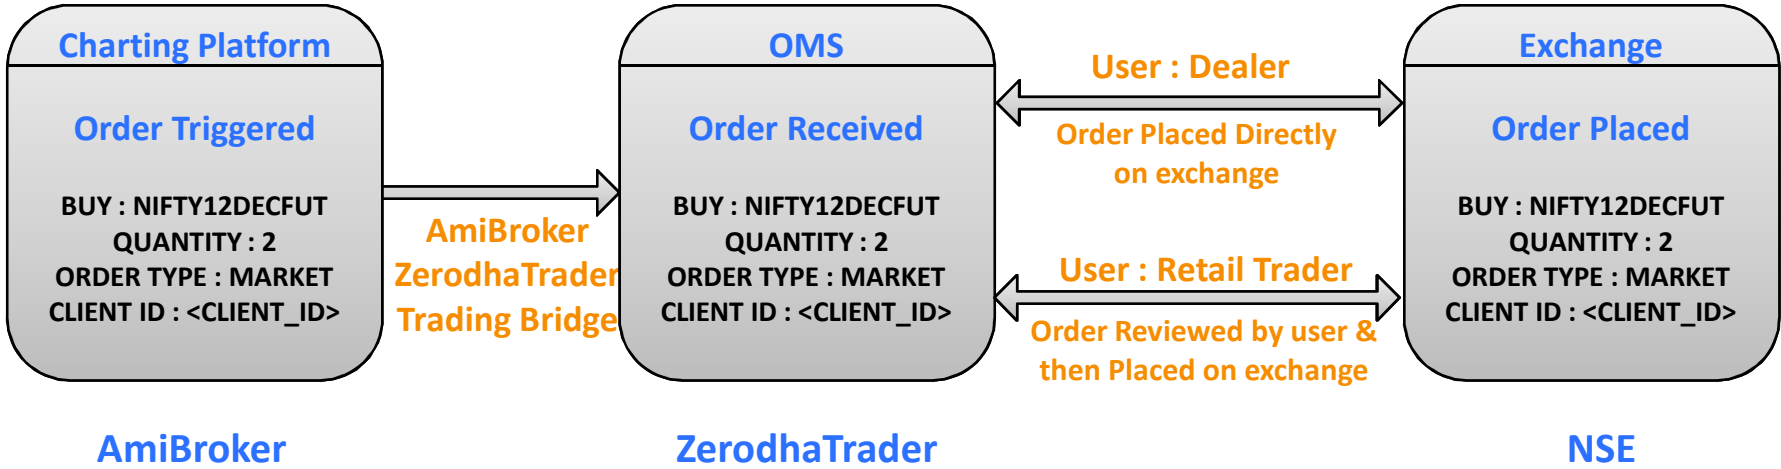

The order so reflected in charting platform will directly be placed on the exchange.

B. If the user is a **Retail Trader** :

The order so reflected in charting platform will reflect in NEST OMS. The user will have to review and accept the order so that it is placed on the exchange.

* As per SEBI / Exchange Regulations

How it works – flow diagram

Minimum Requirements

Users desirous to have this facility will need following :

1. **AmiBroker** : you can purchase it from us (<http://www.globaldatafeeds.in>) or our sister concern <http://www.tradinganalysis.co.in> - who are exclusive official vendor of AmiBroker in India
2. **Realtime data** : from us (Any of our data products as explained here : <http://www.globaldatafeeds.in/page.php?page=nimbledatapro>)
3. **Trading plugin** (provided free of cost by us for all our data platforms and is included with the standard installation)
4. **Trading Account** with Zerodha (<http://www.zerodha.com>)
5. **Active NestPlus Account** from Omnesys Technologies (For more details & subscription, please visit NestPlus Site here : https://plus.omnesysindia.com/NestPlus/Plus/view.jsp?prd=plus_api)

Free Trial

About us – who we are & what we do

Global Datafeeds is Authorised Realtime Data Vendor of NSE. We disseminate authentic, accurate & affordable realtime data with low latency (1sec update frequency) which integrates with multiple charting platforms at once (AmiBroker, MetaStock Professional, Advanced Get, NinjaTrader, Ensign & Elwave).

Having started commercial operations in August 2010, today we enjoy an enviable reputation across user communities and are growing rapidly. Hundreds of professional traders, funds, brokerage houses as well as individual investors use our realtime data products to make their trading and investment decisions everyday.

We are sister concern of <http://www.tradinganalysis.co.in> – the authorised and only distributor of AmiBroker for India.

We are head-quartered at Nashik (Maharashtra) where our central support is located. We also have marketing & server setup at Mumbai and Development facilities in Bangalore.
